DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 21 October 2008 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee. This Amendment is required under 37 CFR 1.78 which requires that benefit of an earlier filing date and cross-reference to other applications must be made in the first sentence of the specification following the title.

Please amend the first paragraph on Page 1, Line 4 of the Specification to read:

"CROSS-REFERENCE TO RELATED APPLICATIONS

This Application is a 371 of PCT/US05/10206 filed 25 March 2005 which claims benefit to U.S. Provisional Application Serial No. 60/557,545 filed 30 March 2004 and U.S. Provisional Application Serial No. 60/638,027 filed 21 December 2004."

Allowable Subject Matter

3. Claims 1-4 and 6-11 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Regarding Claim 1, Applicant's amendments define and distinguish over the prior art made of record, as the prior art of record fails to disclose each and every limitation of the claims as amended. The prior art of record fails to disclose or obviate at the time the invention was made a medication dispensing apparatus, comprising a housing, drive member, and fluid container, and including a gear set having first and second pinions pivotal on a plunger member and shiftable proximally and distally therewith; the first pinion engaging a first rack axially stationary within the housing and the second pinion engaging a second rack movable within the housing on a piece clutchably connected to the drive member, and further including a latching element comprising a latching lip and skid; wherein the skid is slideable along a skid engaging surface during distal advancement of the drive member and the plunger element such that the skid is maintained by a spring force in a first position, during dose preparation and administration, free of a latchable element disposed on the plunger member and wherein the skid-engaging surface shifts distally of the skid such that the skid passes beyond the proximal end upon administration of a final dose allowing the latching lip to be urged by the spring force from the first position to a second position to engage the latchable element and physically lock the plunger element.

Art Unit: 3767

It is the combination of the explicit features of the gear set/plunger member and the latching element that defines and distinguished over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
